

Streamline Your Accounting Workflow From Jobsite to Back Office

Simplify Your Financial Management

BuildTopia® cloud-based construction management software now integrates with Microsoft Dynamics 365 Business Central (Business Central), giving residential builders the tools to manage projects, budgets, purchase orders (POs), and vendor payments – without duplicate data entry or disconnected workflows.

Business Central handles the accounting. BuildTopia handles the rest – purchasing, sales/CRM, scheduling, budgeting, warranty and POs – while syncing key financials back into Business Central.

The Homebuilder Advantage

Field-to-Office Workflow. Track jobsite activity, manage schedules, and approve POs on the go — BuildTopia connects your field team with your office and Business Central in real time.

No More Double Entry. Enter job cost and vendor data in BuildTopia — and they sync instantly with Business Central.

Faster Purchase Order Processing. Send approved POs from BuildTopia directly into Business Central for efficient vendor payments.

Real-Time Vendor Sync. Keep vendor/remittance details updated between platforms and eliminate billing errors.

Complete Financial Visibility. Track project costs, lots, and trade partner payments all from a single dashboard.

Customizable Integration Settings. Choose how data appears in Business Central: cost codes, vendor names, and more.

With BuildTopia and Business Central you gain:

- More accurate accounting
- Improved vendor management
- Greater financial visibility
- Focus on building, not paperwork

What You Can Configure

- » Sync **BuildTopia cost codes** with Business Central **GL accounts**
- » Automate the sending of **approved POs** and **contract changes**

In Case You're Wondering

1 Will I need to change how I use Business Central?

No. BuildTopia works alongside Business Central – it syncs job and vendor data without changing your current accounting setup.

2 Is the integration hard to set up?

Not at all. Our team helps you configure it quickly – no IT department or technical expertise needed.

3 How will my team be onboarded?

Your team is guided through setup, testing, and training to ensure a smooth connection with your accounting system. Training is hands-on, delivered online or in-person based on your needs, and typically completed toward the end of implementation once the system is built out.

4 What does BuildTopia do beyond accounting?

A lot. It manages estimating, budgets, POs, vendor contracts, change orders, and more – all in one system.

5 Can I manage jobs from the field?

Yes. BuildTopia gives your team access to scheduling, approvals, and job info from any device – including mobile and tablet.

6 What will my team need to do differently?

Less juggling. Everyone works from one system – project managers, admins, and even vendors stay aligned with the same information.

7 How secure is my data with BuildTopia and Business Central?

Very secure. Both platforms use encrypted data, role-based access, and secure cloud hosting to protect your information.

8 Is this just for large builders?

No. BuildTopia is built for regional homebuilders – and it scales as you grow.

9 How is pricing structured?

Flexible. We offer subscription-based pricing designed to fit your team size and project volume.

10 What kind of support do I get?

Ongoing and local. You'll have access to our North American support team during business hours – with helpful resources, timely responses, and real people to talk to.

Ideal for residential homebuilders who:

Are already using Business Central and want to extend its value across operations

Need real-time project and financial visibility

Want to eliminate manual processes and disconnected tools

Are looking for a long-term software partner that supports their growth

Want to manage jobs and budgets without double entry?
