

Run Every Lot from the Site.

Bring scheduling, warranty walkthroughs, inspections, photos, and field updates into one mobile app for the team running the job site.

Built for the Field

Cut the Trips Back to the Trailer

Update schedules, status, walkthroughs, and photos from the site. Field activity flows into NEWSTAR and NX without anyone making the drive.

Talk to Vendors at the Task Level

Paired with TouchPoint, every task carries chat and timestamped updates. Vendors see your schedule changes. You see their responses. No more chasing.

Built for Supers Who Run Multiple Lots

Start, reschedule, and complete tasks from the site. Quick action buttons surface the next step so updates take fewer taps.

Keeps Working When the Signal Drops

Offline mode now covers warranty walkthroughs alongside scheduling. Work continues. Data syncs back when service returns.

Why Supers Choose BuilderGo™

Built around how field teams actually work.

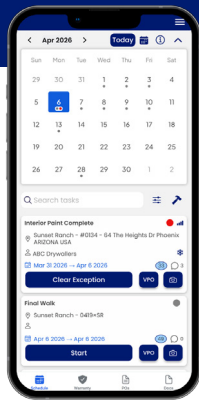

- » Fewer clicks, fewer taps, less training.
- » Photo markup with arrows, boxes, and notes.
- » Vendor chat with an audit trail, when paired with TouchPoint.
- » Available on phone, tablet, or desktop.

"BuilderGo's mobile app has been instrumental in enabling our field teams to work efficiently in areas with unreliable cellular coverage. The offline functionality allows our staff to continue updating inspections and field data in real time, then sync seamlessly once connectivity is available."

— Dino DiLallo | Senior Manager, Field Applications, Brookfield Residential

End-to-End Field Operations

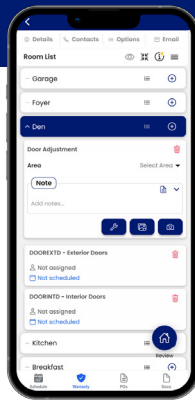

Four core workflows for the people running the job site. All in one app, all syncing back to your ERP.

SCHEDULING

Run Every Lot

Start, reschedule, and complete tasks from the site. Calendar and lot views with progress at a glance across every lot.

WALKTHROUGHS

Warranty Walkthroughs

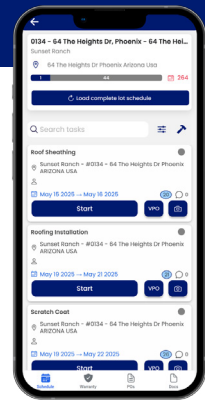

Room-by-room flow with inline deficiencies, photos, and review before submission. Works offline.

INSPECTIONS

Capture and Mark Up

Pre-delivery inspections and on-site photo capture. Arrows, boxes, circles, and notes tied to the right task.

VPOS FROM THE FIELD

Create on the Spot

Initiate variance POs without leaving the task. Pick supplier and line items in one flow.

BuilderGo™ + TouchPoint™. The complete builder and vendor package.

Pair BuilderGo™ with TouchPoint™ to bring vendors into every task. Chat, photos, schedule updates, and a timestamped audit trail back to your ERP.

Getting started

BuilderGo™ works with NEWSTAR™ and NX™, and is part of the Constellation Field Enterprise Bundle. Setup and a brief training session are delivered by Constellation's Professional Services Group (PSG). Existing customers update the app through their app store to move to the new release.
