

Access the industry's most accurate and timely homebuilding data

Gain critical insights on homebuilder finance, operations, construction and sales through easy-to-understand reporting, analytics and dashboards.

Data you can trust

BuilderMetrix is the only solution that sources accurate financial and operational data from live builder ERP systems. Constellation is the largest homebuilder ERP provider, and our data is sourced from 300+ builders, including 40% of the largest homebuilders in North America. BuilderMetrix also features real-time resale, rental, and new home data from the MLS®, making it the most robust and accurate data available.

Access data in real-time

BuilderMetrix is the most up-to-date and comprehensive data in the industry. Automated ETL processes keep data current, eliminating hours of work teams spend on manual report building.

Augment your in-house data

Doing analytics in-house? BuilderMetrix features a flexible data extension to push data to your internal SQL database. Data is aggregated and fully anonymized.

Unified Data Warehouse

Consolidates ERP, MLS, Sales, Construction, and warranty data into one reliable source of truth. Accessible via Power BI, Excel, or Stella AI.

BuilderMetrix® for Excel

Access Live Data. Eliminate siloed spreadsheets

BuilderMetrix® for Excel is a powerful add on that brings your real time ERP data directly into Microsoft Excel - no exports, no stale spreadsheets, no manual work.

- **Access live homebuilding data in Excel.** Refresh job costs, GL balances, AP, sales, community data, and more in real time - all from your BuilderMetrix environment.
- **Pre built and fully customizable analyzers.** Get started instantly with ready-to-use reports - or create your own.
- **Fewer errors, less manual work.** Eliminate CSV exports, outdated spreadsheets, and copy paste errors. Always work with live, accurate data.
- **Familiar reporting tools.** Use Excel pivots, formulas, charts, and filters to build custom reports without needing IT support.
- **Instant drill down.** Click from summary level metrics straight into transaction details to uncover insights fast.

BuilderMetrix for Excel aligns with our commitment to stronger, data driven decision-making, and we see significant potential in having our teams work directly with live homebuilder and industry data in Excel.

Todd Kearney | Director of Information Technology at DSLD Homes

Get instant, decision-ready answers with Stella AI™

Stella AI is a purpose-built, homebuilding intelligence engine built for executives and frontline teams alike.

Stella analyzes operational, financial, construction, and sales data from robust homebuilder and industry data surfaced from BuilderMetrix to provide real-time insights, trend detection, and recommendations across the full homebuilding lifecycle.

Ready to see Stella AI in action?
constellationhb.com/stella

Most builders are just beginning to explore AI, but Constellation is already shaping what the future will look like, with practical, builder ready tools that will help homebuilders unlock efficiencies and gain a competitive edge.

Ty Brewer | Chief Digital Officer at HistoryMaker Homes.

Make faster, smarter decisions

Turn complex questions into plain-English answers and clear insights - instantly. No waiting on custom reports or digging through spreadsheets.

Free up your team's time

Automate tedious work like pulling data, checking vendor status, and preparing drafts so people can focus on high-value tasks.

Answers you can trust

Stella grounds responses in your tenant data and industry data surfaced through BuilderMetrix - so teams move quickly and confidently.

See risk early

Get complete visibility across communities, divisions, and timeframes to spot overruns, schedule risk, and margin erosion sooner.

Reduce costly errors

Actions follow your business rules and require explicit confirmation before anything is committed. You stay in control.

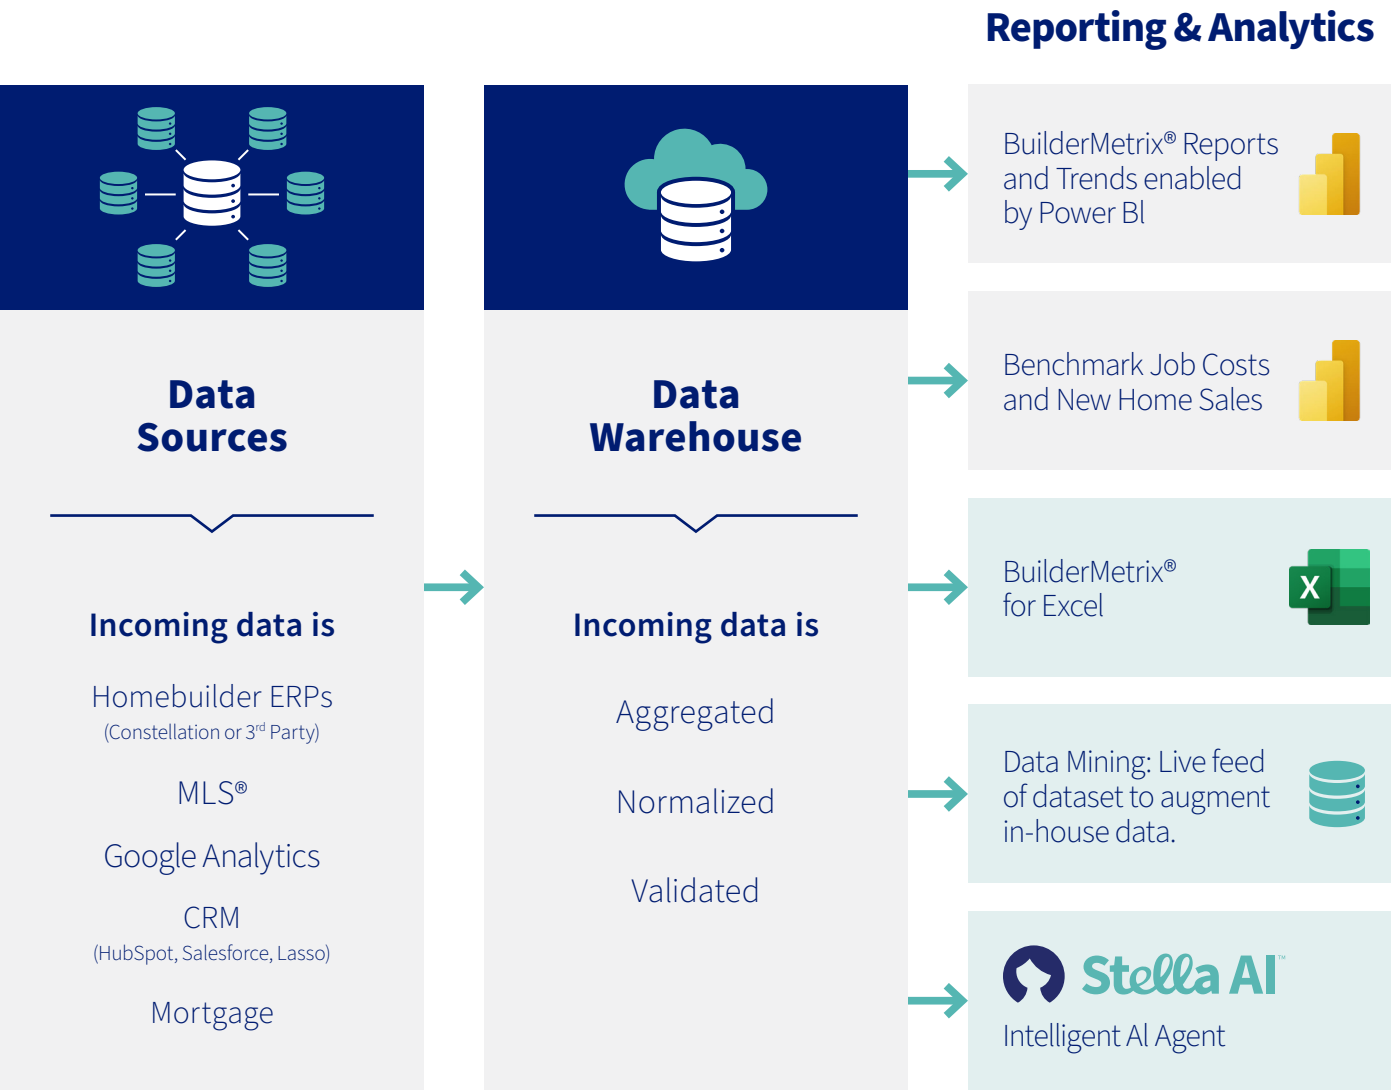

Much more than a chatbot

Unlike generic chat tools, Stella reasons over your data, applies guardrails, and can draft actions with confirmation prompts where enabled, reducing risk while improving speed.

Data Flow with BuilderMetrix®

All your homebuilder data (i.e., ERP, CRM, Warranty, Survey) is stored within your data warehouse, creating a standardized and validated single source of truth. The data then passes through an extraction, transformation, and loading (ETL) process where it's transformed into standardized tables, validated, and then uploaded into BuilderMetrix. We use Microsoft Power BI and Microsoft SQL Server to enable this.

Once the data is loaded, the automated reports within BuilderMetrix are accessible to anyone on your team.

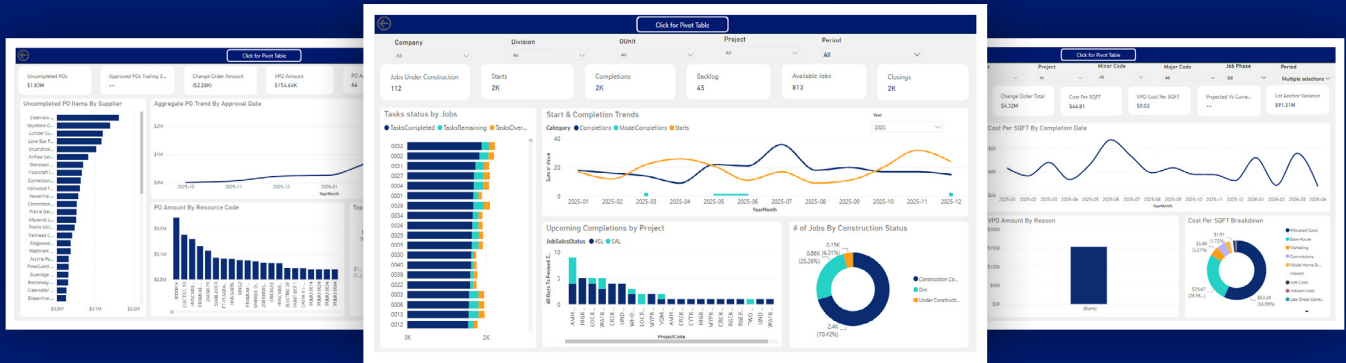

Constellation was our ideal choice to sponsor the Business Results section of the NHQA program because they embody the same commitment to excellence in their operations and service to the industry.
